Lab 5-Spring 2025 (1)

February 24, 2025

Instructions Follow the instructions given in comments prefixed with ## and write your code below that.

Also fill the partial code in given blanks.

Don't make any changes to the rest part of the codes

0.0.1 Answer the questions given at the end of this notebook within your report.

0.0.2 You would need to submit your GitHub repository link. Refer to the Section 6: Final Submission on the PDF document for the details.

```
import cv2
import numpy as np
import matplotlib.pyplot as plt
from sklearn.cluster import KMeans
from scipy.spatial import distance
```

[3]:
```
## Reading the image plaksha_Faculty.jpg
img = cv2.imread("plaksha_Faculty.jpg")

## Convert the image to grayscale
gray_img = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)

# Loading the required haar-cascade xml classifier file
face_cascade = cv2.CascadeClassifier(cv2.data.haarcascades +␣
 ↪"haarcascade_frontalface_default.xml")

# Applying the face detection method on the grayscale image.
## Change the parameters for better detection of faces in your case.
faces_rect = face_cascade.detectMultiScale(gray_img, 1.05, 4, minSize=(25,25),␣
 ↪maxSize=(50,50))

# Define the text and font parameters
text = "Face is detected" ## The text you want to write
font = cv2.FONT_HERSHEY_SIMPLEX  ## Font type
font_scale = 0.5  ## Font scale factor
font_color = (0,0,255)  ## Text color in BGR format (here, it's red)
font_thickness = 1  ## Thickness of the text
```

```python
# Iterating through rectangles of detected faces
for (x, y, w, h) in faces_rect:
    cv2.rectangle(img, (x, y), (x+w, y+h), (0, 0, 255), 2)
    # Use cv2.putText to add the text to the image, Use text, font, font_scale, font_color, font_thickness here
    cv2.putText(img, text, (x, y-10), font, font_scale, font_color, font_thickness)

## Display the image and window title should be "Total number of face detected are #"
# Convert BGR to RGB for proper Matplotlib display
img_rgb = cv2.cvtColor(img, cv2.COLOR_BGR2RGB)

# Display the image inline in the notebook
plt.figure(figsize=(10, 6))
plt.imshow(img_rgb)
plt.axis("off")  # Hide axis
plt.title(f"Total number of faces detected: {len(faces_rect)}")
plt.show()
```

```

0.1 Report:

0.2 Answer the following questions within your report:

1. What are the common distance metrics used in distance-based classification algorithms?

2. What are some real-world applications of distance-based classification algorithms?

3. Explain various distance metrics.

4. What is the role of cross validation in model performance?

5. Explain variance and bias in terms of KNN?
